

YASH AGRAHARI

Software Engineer — Python Backend Developer

📞 9792920841 ✉ agrahariyash10@gmail.com [in linkedin.com/in/yash-agrahari](https://www.linkedin.com/in/yash-agrahari) github.com/yashagrahari

Professional Summary

Software Engineer with 4 years of experience building scalable backend systems, AI-assisted workflow automation platforms, and enterprise-grade APIs using Python, FastAPI, Django, Redis, and AWS. Experienced in designing decision-driven orchestration systems, intelligent document-processing workflows, and real-time automation pipelines across healthcare and enterprise domains. Delivered high-impact automation solutions resulting in multi-million-dollar operational savings and improved process efficiency at scale.

Education

KIET Group Of Institutions

B.Tech in Information Technology

Aug. 2018 – July 2022

Ghaziabad, Uttar Pradesh

Technical Skills

Languages: Python, Java, SQL
Backend: Django, FastAPI, Flask
Databases: PostgreSQL, MySQL, MSSQL, Redis
Cloud & DevOps: AWS, Docker, CI/CD, Git
Tools & Concepts: Celery, Kafka, Airflow
AI: OpenAI SDKs, Agents, Langchain, Generative AI, Prompt Engineering

Experience

Optum Global Solutions

Software Engineer

Apr 2025 – Present

Bangalore, Karnataka

- Automated manual healthcare operations resulting in approximately \$9M annual operational savings and significant reduction in processing time.
- Developed AI-powered workflow automation systems for Claims, Appeals, and Dispute processing using Python, FastAPI, Azure OpenAI, Redis, and MSSQL.
- Designed scalable REST APIs and asynchronous processing pipelines for high-volume enterprise workflows.
- Implemented AI-assisted workflow orchestration pipelines based on SOP-driven decision trees and document-processing logic.

HashedIn by Deloitte

Software Engineer

Aug 2022– Mar 2025

Gurgaon, Haryana

- Designed and developed scalable backend applications and REST APIs using Python and Django for enterprise-grade cloud solutions.
- Integrated AI chatbots for organizational queries, providing personalized career paths for individuals using generative AI
- Increased unit test coverage from 50% to 85% using Django Test, Pytest, and mocking frameworks, ensuring reliable and high-quality code.

Projects

SOS Guardian — AI Emergency Detection & Response System | *FastAPI, OpenAI SDKs*

Apr 2026

- Built an AI-powered emergency response system capable of detecting distress situations from real-time voice conversations using speech-to-text and LLM-based classification pipelines.
- Designed asynchronous audio processing workflows to batch and analyze live conversation streams for emergency intent detection and automated alert generation.
- Integrated real-time transcription, multilingual speech recognition, and AI-driven risk analysis using Python-based backend services.
- Developed scalable backend APIs and event-driven processing architecture for handling continuous audio streams and emergency notification workflows.

CPML | *FastAPI, MSSQL, Langchain, AI*

Apr 2025-Present

- Developed an AI-assisted workflow orchestration platform to automate healthcare operational processes based on BRDs and SOP-driven decision trees.
- Implemented document-driven automation logic using structured data extraction and business-rule evaluation to reduce manual processing efforts across multiple healthcare scenarios.
- Collaborated with cross-functional business and product teams to translate complex SOPs into configurable workflow automation pipelines.
